PURCHASER'S INFORMATION

The units for this project are designed for seniors of all ages, allowing us to age in place. Presently, we offer many desirable standard features such as:

1. A straight staircase designed to allow installation of an electrically operated stair lift or wheelchair lift. This can be installed at a relatively low cost when the need arises.
2. There is a large ensuite washroom equipped with washer/dryer for your convenience.
3. Washrooms are large enough for walker / wheelchair use and, if a walk-in shower is installed, the wheelchair or walker can fit easily into the shower.
4. All doors are wide enough for wheelchair / walker access.
5. Additional, convenient heated storage space in the second-floor attic with access through a walk in door, not a hatch in the ceiling.
6. All units come with a soaking tub, combined with a shower. There is an upgrade to change the tub to a walk-in shower. The washroom is designed so you can upgrade the tub for a shower at a later date if the need arises or it can be installed during construction for an addition to your base lease price.
7. The following tech features are available for your unit as standard in the base lease price.
 - ☒ Solar array [solar panels]
 - ☒ Outdoor, lockable electric car-charging outlet
 - ☒ Air conditioning
 - ☒ Kitchen pantry unit
 - ☒ Extra closet and shelves in leisure room
 - ☒ High seat toilets
 - ☒ Combination bath and vanity seat
 - ☒ Large second floor ensuite with laundry hook up
8. Upgrade Packages you can access include; 1. Voice-activated Smart Home Automation Hub; 2. Independence / Mobility Upgrade; 3. Storage Upgrade; 4. Appliance Upgrade Package. (See Page 12 for details).
9. All units have both a patio and balcony for relaxing or entertaining.
10. Each unit has a parking space by your front door – no long walks through the basement garage or parking lot to get to your car.
11. All units come with their own independent, lockable electric charging plug for EV cars.
12. Your base price includes a rooftop solar array [solar panels] that should supply up to 85% of your electrical needs. This figure depends on how you use your electricity and the amount of sunshine received each year. This power should be sufficient for most of your heating, air-conditioning, hot water and your electricity for your appliances, lighting and electrical outlets. The heating and air-conditioning come from an electric air heat pump. The balance of your electrical need will come from the grid should the solar panels not supply enough electricity. NOTE: the solar array on this project will remove the equivalent emissions from 40 gasoline powered cars from the atmosphere per year. These townhomes are beyond net zero emissions and way above future government greenhouse emissions standards.

These are the in-house features which are only the start of your future life at Sunshine Village. Many other conveniences and attractions can be enjoyed around charming Penetanguishene.
